AI Engineer | Python Developer | Immediate Joiner

PROFILE

AI Engineer and Python Developer with 5+ years building production-grade automation and LLM systems. Specializes in agentic AI pipelines, gRPC model gateways, and attribute-level RBAC for enterprise AI platforms. Proven impact: 70% auto-resolution of failures, 55% MTTR reduction, 50% faster pipeline validation. Brings systems engineering depth to AI integration work.

CORE SKILLS

AI & LLM	Agentic AI · LangChain · RAG Workflows · Vector DB · LLM Evaluation · Hallucination Detection · Ollama · QWEN 2.5 · Google Gemini · Claude Code · Prompt Engineering
Backend	Python · FastAPI · gRPC · Robot Framework · Node.js · Celery · AsyncIO · Multiprocessing · GraphQL · REST · XML-RPC
Data & Infra	PostgreSQL · Redis · Kubernetes · Docker · AWS (AppSync, AppFlow, IAM) · MongoDB · SQLite · SQLAlchemy · Pydantic
Frontend & Tools	Streamlit · React + Vite · Tailwind CSS · Git · GitLab · JIRA · Figma · MCP

EXPERIENCE

Brane Enterprises Pvt. Ltd.

Apr 2026 – Jun 2026 · 2 months

AI Engineer · Associate Solution Leader

- Contributed to production AI Agent runtime for a no-code platform - worked across PSQL schema design, LLM inferencing via gRPC, agent loop development, prompt engineering, and performance optimization.
- Implemented PSQL schema components: agent identity tables, multi-agent LO junction tables, attribute-level RBAC permission rows, and agent execution sibling tables (lo_input_execution_agent, agent_run_scratch, agent_episodes).
- Integrated LLM inferencing layer via gRPC model gateway → **multi-provider model routing (instruct, thinking, vision) with stateless horizontal scaling.**
- Engineered prompt assembly for the agent loop: system prompt, grounded input injection, tool registry context, retry-with-feedback construction for the verifier correction loop.
- Resolved bugs and optimized performance → **attribute RBAC caching, tool invocation overhead reduction, response parser hardening for malformed LLM outputs.**

Infinite Computer Solutions (Nokia-Ext)

Jun 2025 – Apr 2026 · 10 months

Python Developer · Automation Engineer

- Built a 5G failure detection and remediation pipeline : Pyshark extracts signaling errors from pcap files (authentication timeouts, handover disruptions, congestion), LangChain RetrievalQA matches them against a vector DB of known error patterns, and an LLM generates contextual fix suggestions; Redis caches frequent error lookups → **70% auto-resolution of routine errors, 55% MTTR reduction, reduced log analysis from hours to seconds. Stack: Python · Pyshark · LangChain · Vector DB · Redis · claude-sonnet-4-6.**
- Continued UDM/AUSF 5G testing activities (LOT3 CCTF TDG Germany) after transition to Infinite → **maintained project continuity with zero disruption across team and client deliverables.**

Nokia Networks

Aug 2022 – Jun 2025 · 2 yrs 10 months

Python Developer · Automation Engineer

- Built an AI-powered 5G Robot Framework keyword generator (Streamlit + FastAPI + Claude Haiku) — natural language test descriptions are parsed by an LLM entity extractor, mapped to deterministic procedure templates, and validated by the RF parser before output; regex fallback ensures 100% uptime even on LLM failure → 50+ weekly generations, reduced keyword creation from hours to minutes, freed seniors for complex multi-vendor interoperability scenarios → **50+ weekly generations, freed engineers for complex multi-vendor interoperability scenarios.**
- Architected NFTRACE : a distributed REST-based network function tracing platform: FastAPI endpoints for lifecycle management (start/stop/merge/validate), Redis-backed session caching for parallel execution isolation, SQLite persistence for node state and execution history, XML-RPC for client-side SDK communication : decoupling test scenarios from validation logic → 50% reduction in pipeline validation time across CI/CD workflows
- Authored Python code review checklists (thread safety, Docker best practices) adopted as team standard → **25% improvement in code quality scores; mentored 3 mid-level engineers to senior readiness via 1:1 review sessions.**
- Executed 5G Core UDM/AUSF functional testing (LOT3 CCTF TDG Germany) : validated Diameter signaling flows, subscriber data management, K8s pod health, and real-time cluster dashboards; delivered Agile sprint reports and maintained strict deployment schedules → **zero missed deliveries.**

Abjayon Pvt. Ltd.

Jan 2022 – Jul 2022 · 7 months

Node.js Backend · AWS Developer

- Integrated AWS AppSync and AppFlow to connect frontend/backend pipelines → **15% improvement in data retrieval efficiency.**
- Developed and optimized GraphQL and REST APIs; managed IAM roles for secure resource access and compliance.

Lakshya Space

Mar 2021 – Jan 2022 · 10 months

Python & Web Developer

- Developed Python firmware for embedded sensor systems in resource-constrained hardware environments.
- Mentored and supervised a team of 19 interns in web development.

KEY PROJECTS

LLM Evaluation Framework : Automated hallucination & prompt regression detection in 4 minutes vs 3 days manually. Stack: Python, LLM APIs.

LLM Bias & Fairness Auditor : Regulatory-grade bias detection for hiring/lending in 60–120 seconds using statistical rigor. Stack: Python, statistical ML.

AI Employee Management System : AI resume parser reducing candidate onboarding from 15 minutes to 30 seconds via plain-English chat. Stack: Python, LLM, RAG.

Prompt Regression Suite : CI/CD test suite for LLM prompts : catches breaking changes before production, cuts API costs 50%. Stack: Python, pytest.

Financial Statement Parser : 100% private, browser-based AI that transforms messy bank statement PDFs into categorized Excel reports in 10 seconds. No servers, no data leaves your device. Stack: Python, AI, browser.

Blog / Docs Site Generator : Drop Markdown files in a folder, get a fully navigable documentation site instantly. No routing config, no frontend code : just write. Stack: Astro, Markdown.

EXTRACURRICULAR ACTIVITIES

Graphic Designing for Social Awareness Activities

EDUCATION

Vasavi College of Engineering, Hyderabad

2021

B.E. Computer Science
