About the Role:

We are seeking a **Python Backend Engineer for the development of Artificial Intelligence (AI) enabled applications** in Commercial Lending area. The candidate should have strong background in building scalable, resilient, and highly available **microservices Gen AI enabled application**. This role focuses on building and operating Python-based backend services that support analytical workflows, AI-assisted processing, and document-centric use cases. Team member will work with Wells Fargo India and onshore partners and implement the required solutions.

In this role, you will:

- Build Large Language Model (LLM) powered applications that support powerful capabilities for internal Wells Fargo users, with a focus on agentic workflows, prompt engineering, evaluations, and safety guardrails.
- Build systems utilizing Large Language Models (LLM) involving data ingestion pipelines, reliable service orchestration, backend application state management, and data layer implementation.
- Design, code, test, and document solutions aligned with business objectives and enterprise standards.
- Collaborate and consult with key technical experts and cross-functional technology teams to resolve complex technical challenges.
- Participate actively across the full software development lifecycle, from design, development through deployment and support.
- Responsible for application development, maintenance, and adherence to security requirements
- Collaborate with US partners for requirement understanding and solution discussions.
- Collaborate with Product Team, Scrum Master, Developers, QA and any other stakeholders as needed.
- Stay current on emerging technologies in AI to continue to the strategy discussion for future capability development.

Essential Qualifications (Technical Skills):

- 7+ years of backend application development experience, with **strong proficiency in Python and NoSQL database MongoDB**.
- Strong hands-on experience with **Agentic AI frameworks** (any one of **Google ADK (preferably)** Langchain, Langgraph) and tools in cloud environments. Proficiency in

designing and developing multi-agent systems with one of the listed frameworks where multiple AI agents collaborate to achieve complex tasks.

- **Experience building GenAI-enabled solutions, including Retrieval-Augmented Generation (RAG) and agentic workflows, with a solid understanding of prompt engineering, grounding, and extensibility.**
- In-depth experience with Python libraries and tools such as **NumPy, Pandas, and PyMongo**.
- Design, develop, and deploy **Python-based microservices using FastAPI**.
- Design and implement **secure REST APIs** for consumption by a React application. Consume services provided by interface systems.
- Implement **event-driven architectures** using messaging platforms such as **Kafka**, RabbitMQ, or ActiveMQ for asynchronous processing.
- Experience working with **Model Context Protocol (MCP)** servers and clients to securely expose internal services, APIs, and data stores to LLMs. Experience on FastMCP.
- **Strong experience writing complex MongoDB queries and performing data aggregation.**
- Understanding of **cloud**-native principles with hands-on experience developing applications in cloud environments; **OpenShift (OCP) experience** is preferred.
- Experience with **CI/CD tools** such as GitHub, GitHub Actions, Harness, JFrog Artifactory, Sonar, **OpenShift/Kubernetes**, and Docker.
- Experience with automated testing frameworks including Pytest and MagicMock.
- Working knowledge of ML and NLP concepts, including GCP services such as Document AI, Information Retrieval, Summarization, and LLMs.
- Experience working in an Agile software development lifecycle.
- Understanding of high availability, scalability, and resilience in microservices based enterprise systems.
- Ability to design and implement efficient multithreading and concurrency in backend services.

Non-Technical:

- Strong analytical and problem-solving skills with the ability to reason through complex problems independently or collaboratively.
- Ability to mentor team members on solution design and implementation best practices.
- Good written and verbal communication
- Strong interpersonal skills with the ability to navigate team dynamics and exercise sound judgment to achieve outcomes.

Desired / Good to have Skills:

- Understanding of Banking/Lending domain
